

Inland deliveries of petroleum products

In 1992, deliveries of petroleum products within the Community amounted to approximately 493,9 million tonnes, 1,4% up on the previous year (486,8 million tonnes).

The situation regarding the main products is as follows :

- a slight increase in deliveries of motor fuels (+1,7%) due in part to the conversion to diesel of some of the car stock in certain countries;
- a marked increase in jet fuels (+7,3%) making up for a year of stagnation due to the Gulf war in 1991;
- no change for gas oil and diesel oil. However this conceals two diverging trends. Derv fuel in fact rose by 4% whereas, due to mild weather conditions in 1992, heating oil fell by 4%;
- a standstill for residual fuel oil. In fact, a large part (more than 50%) is normally consumed by those public supply power stations known as peaking and load following plants (except in Italy); as hydroelectricity production in EUR 12 rose by 7,8% an increase in the use of fuel oil in peaking and load following plants was rendered unnecessary.

The main trends in the various countries were as follows :

- compared to 1991, relative stability in the main consumer countries except for Italy where deliveries were pushed up by a big increase in the use of heavy fuel oil in power stations;
- a drop in consumption for Denmark and Greece;
- a contrasting situation in the two parts of Germany after reunification (i.e. after 3.10.1990): a slight increase in the West (about 0,4%) and a sharper rise in the East (about 2,7%); this increase was at the expense of solid fuels.
